

Report From Merrie Olde England

There is very little Credit Card fraud here, since some years ago numbers corresponding to actual phone numbers were abandoned. It used to be an amalgam of your number. Now the number must fit into a secret matrix the operators have. Thus fraud comes about only by people amalgamating two or more numbers using bits of each to form a "good" one. If you are off by just one digit, they know immediately and tell you so. All UK CC's start 44K which I think is international - the country code, then a "year" letter. US now is 1K, right? (1976). I have tried to figure out this matrix number but to no avail. Here are some examples of cards that are billed to the same phone number. Do not use or reveal them, DELETED but if you have any budding genius who would like to see if he can devise the matrix, then let him. I think it would be far too expensive to equip each operator console with a computer validation all at once, so this is probably the forthcoming US system. Has anyone had any experience of any comeback by security or anyone else as a result of making phony international calls using CC's?

When making international calls here, you call operator (Dial 100) who first checks to see that you are not on a pay phone and possibly verify your number as busy, then she calls the international operator and clicks off. International then takes your number and calls you back after setting up the call. So if you are at a center remote to her, she cannot verify your phone's status. If you had the # to call international direct, you could do it from a pay phone safely and have her think it is a domestic phone. If you had these #s then, they could be rather useful; certainly here, possibly in the US, too. [typical British understatement]

When using fake CC's, some people in UK go to a pay phone, lift receiver (this gives you dial tone immediately here), dial any digit and leave receiver off its rest. Then they go to another pay phone, preferably some distance away but from which they can see the first one. Make the call, and when the operator asks for your number (which they always do here), give the number of the other box. If they check, they get busy tone - even if they check on their special interior phone circuits, they get the right condition; i.e., someone waiting on the line. If the Feds come, you have a grandstand view from a safe distance.

If the operator is going to call the Feds, she may:

1. Spend an abnormally long time putting you through.
2. Give you a ringing tone, the sort that never gets answered, to keep you there as long as possible.

Try #KPO4412468072ST for a recorded description of clap symptoms. The London (01) 246 xxxx exchange is the equivalent of Big Apple's 999 exchange. Do you have any interesting 999 #s? I only know Dial-a-Joke. If you have 1DDD then (44)12468015 and 8017 are not souped. They are only continental and US tones demo, tho.

When traveling from UK to Germany take plenty of shillings - 5p. pieces (worth 8¢) work as 1 DM (worth 50¢) in German slot machines.

METER JUMPING

In order to avoid any breaking of seals or disturbing of meters, as well as having a system that can be removed immediately when the power man calls, some UK power freaks do the following: Two neon screwdrivers are inserted where wires run in and wiggled about until they light. Copper wire on crocodile clips is run between them. The methods you have shown make getting caught too easy.

I'll be sending you what I have on computer crime.

PDP - 10 operator only commands would be very useful, please. I could send passwords, etc. but unless you had CCITT vol. 24 (or 21, not sure) modems, it would be of little use to you.

MAR-APRIL 1977

No. 43

THE SILVER BOX

The "Silver Box" referred to by one of your correspondents is a 2280Hz tone interrupted at dial pulse speed (signalling system AC(9)). I imagine 2600Hz pulsing is used in US in exactly the same way. I sent you articles on how. SF generators are so much easier to build, it's a pity you've not published more about them.

Here the problem is that for SF you need the secret internal P.O. trunk routings, which are completely different for each exchange. So either you need your local operator as a girl friend, or you randomly dial bleeps and ask people their number and build up lists that way.

One question more: In UK about 50% of coin boxes (pay phones) can be used to make ISD - International Subscriber Dialing - to the rest of Europe. The boxes can't handle the high metering rate to US. So if the machine would let you, they would be free. How then does the automatic international equipment validate and discriminate between pay phones and domestic phones (which can call US direct)? I thought the most likely answer is that the off hook resistance of pay phones is different and can be measured automatically. If so, would payphone or domestic phone resistance be higher? I realize I'm talking about foreign equipment but any thoughts you have would be appreciated.

You think Bell smells, well the PO stinks to high heaven! Calls over 30 miles [aren't you metric yet?] midmorning are £2 (about \$3.20) for ten minutes. Also 200 bits/minute [illegible] rental £100 per annum, weigh 20lbs, and are based on 20 year old technology. All international charges are at least twice to three times as much as other countries. No "foreign" attachments allowed at all (except answering machines). Complete and total monopoly on all forms of communication - even modulated light and carrier pigeons. No CB, and to become a Ham you need to be a fucking electronic genius, and then there are so many restrictions, it isn't worth it. Celebrate your independence!

You're right about this being a Police State. You can't even breathe without permission from our Communist government. Police here can search anyone or any premises on whom or in which they "suspect" drugs, which gives them carte blanche.

The laws on currency exchange control are not even published. You can't even find out what they are; you can only get a "Yes" or "No" answer from the Treasury.

You're right; phones aren't everything. Thanks a million for the Libertarian stuff. It's exactly what I'm into politically. Until now I thought I was unique (I probably am, here). There's only one thing a government should do for its people, only one social service, and that's to keep 'em free.

I'd very much like to get that printed circuit layout. How's it coming? (See #41)

© Youth Hot Line Reports, Inc. 1977 - Do not make checks out to Youth Hot Line Reports, PLEASE! Movement groups may reprint without permission if TAP's address is given with all credits. Please send us a copy of reprinted work. WARNING: We will prosecute copyright violators.

Radio Shack are very good and deserve a plug from you (plug=mention, in case of language barrier. Oscar Wilde: "the English and the Americans are separated by a common language")

Would anyone want a standard English phone in exchange for ??? I doubt it - they're grotty (nasty). I have American, Austrian, German, Swedish, and private system phones in my collection.

Have you ever gone on Holiday and thought of the true cost of it? Not only is there the cost of your holiday accommodation, but the continued cost of your own home. For a Briton like me to come to the US, it is ludicrously expensive. However, what I have in mind is a swap, for, say, three weeks next September. I have a very nice modern apartment, two bedrooms, color TV, etc., 400 yards from the sea on the South coast near Brighton, which has everything and is the place to holiday. I would also like to swap cars, if possible. Mine is a 3.5 Liter auto saloon, tho I don't care what kind of car I get in return. Bomb throwing anarchists are requested to leave their bombs behind, as this is rather a conservative area. No more than three people. I would like in return, for my girlfriend and myself, anything similar in the Big Apple or somewhere relatively near in NJ, or even possibly Cleveland, OH or Montreal/Toronto.

We'd have to negotiate about phones. Mine is permanently tapped - yes, I've made a lotta mistakes. You could retune a BlueBox to SSMF2 and use the call box opposite or credit cards to call the US. [It's a GREAT idea, and if anyone is interested, we'll forward your letters. We assume NO responsibility.]

Enclosed are some photocopied articles from Undercurrents. They're a bit intellectual and heavy and have tended to reject Fone Fucking as not being "respectable" and what AT (Alternate Technology) is all about. TAP readers may be interested in subscribing. [YES! Undercurrents, 11 Shadwell, Uley, Dursley, Gloucestershire, England is \$7.50 for 6 bimonthly issues, and don't ask for it for free. Things are rough enough over there. It is GREAT! The best thing to come out of England since... ah... maybe the best thing ever to come out of England. It's what TAP could be like if we had enough people. Maybe we should just send them our entire files, and retire.]

Thanks for the Esquire article. The article gives the impression that the typical freak is a blind, spaced-out, Jewish homosexual. Another impression is that there is a hard core of super-techno-freaks who know everything there is to know, and who, quite rightly haven't publicized it - like you wouldn't want everyone to know how to bring Bell to its knees.

There is the same cadre here. Duncan Campbell is the most famous, a veteran from the trial some three years ago which made the PO look like a bunch of dummies, (which they are, of course). He's tied in with Undercurrents, for whom many of the other freaks work. They are also interlinked with B. I. T. - whom you know about. [B.I.T. Alternative Information Exchange and Energy Center, 146 Great Western Road, London W11, England] The rest are a few mavericks working on their own - mostly PO operators with access to the AC9 translation codes, which are kept in a special safe at each exchange, and which, of course, are unique for each exchange.

Kilgore Trout mentions in #37 the boxes the military use, with the five extra buttons used presumably for different levels of priority and for interception and possibly for "seizing" and rerouting of calls in progress. Lemond and Fry say in No Place to Hide "... the bluebox could also have been used to intercept a phone call in progress." They do not explain this.. Any ideas?

Here is CCITT #5. Note the remarkable similarity to your own, with the addition of 11 and 12, all possible permutations of frequencies are used. Add one extra frequency and you get six more possibilities.

All MF systems - SSMF2 (Western Europe's up and coming system) Touch Tone frequencies, etc. follow the same pattern: when they need five extra numbers, they add one frequency spaced up the "same distance" from the others. 2100Hz we know is used to make satellite circuits possible for data traffic. 2100 is "disable echo suppressors". That

makes a neat gap between 1700 and 2100 - to wit: 1900Hz, our magic Open Sesame frequencies. Your mission, should you decide to accept it, is to test 700 & 1900, 900 & 1900, 1100 & 1900, 1300 & 1900, 1500 & 1900, and perhaps even 1700 & 1900 (since 1700 is used as a control frequency anyway, used with our special control frequencies 1900 might be a super special control #).

Where you insert these numbers, I don't know. Before KP, in conjunction with KP2, using two of these special #s to unlock the system, this is anybody's guess. Best to practice calling a phone # you know to be busy with conversation or music on the line. If you hit it, Whoopie!

Sorry to close on a down note: The world is coming to an end, or very near it, beginning 1982, through to 1984 - nuclear war, all of America's seaboard cities and all of Europe destroyed. Both chemical and biological warfare, total economic chaos and starvation. No, I'm not a Jehovah's Witness or a headcase. It's all there, in the heavens. Ask any astrologist, or any futurologist, or Bowie "We got five years", or anyone. I suggest an Alaskan igloo and two years' supply of everything.

Depravo the Rat

England is a bit further down the road to collapse than the US. I could list dozens of my favorite books about disaster, but will settle for these: Asimov's Foundation trilogy, John Christopher's No Blade of Grass, Pat Frank's Alas, Babylon, E. T. Tennyson's The Time of The End. "The Earth has become a rotten egg, held together with too many technological Band-Aids, and unless the vast majority of people vocalizes and expresses opposition and repulsion to the vulture-like desecration of the planet, then they will become the cannibal rabble of Soylent Green, and the paranoid powerless of 1984." Chris Barry in The Aquarian

After I saw the classic map of fallout patterns, I figured on retreating to the Siskiyou region (CA-OR border), but the Hanford Nuclear Reservation is in the vicinity. Buried there are more than 75 million gallons of radioactive wastes, which may be dangerous for up to 500,000 years, in tanks which may last only 25 years. Some are already leaking.

And then there's Geophysical Warfare, described in the December Saga magazine. "Science-fiction weapons" like the "Stoneburner" of Dune and "green lights" of Day of the Triffids actually exist, in the form of laser weapons. And then there are ones we don't even know about! So I may follow Dr. Asimov's advice: Eat, Drink, and Be Merry... JP

ALIEN PORN

TV piracy is happening in a small way in the South of France. One village now has its own TV relay station, set up by a local engineer because of poor reception. However, they rapidly realised that they could also use the relay for programme origination. They aren't very radical about it - the weekly unofficial spot includes the mayor's account of the past week plus odd local gossip. But at least the local gendarmes are too sleepy to worry about the illegal transmissions.

A more serious and effective experiment took place at Lezevou on July 8th. In the middle of a play, transmissions were suddenly interrupted by two minutes of hard porn, which equally abruptly returned to normal material. The source was some local freaks who jammed out the normal signal into the TV transmitter with their own programme - recorded on a videotape, and played back through a low power transmitter close to the receiving aerial of the Lezevou transmitter. Because the station normally acts as a local relay for the main transmitter many miles away, any

UHF receiving aerials (white rectangles) on a British local TV relay transmitter

group transmitting on the same frequency as the main transmitter have got themselves a pleasingly powerful broadcasting station. Since you are much closer to the receiver, you don't need to use very much power. And you're guaranteed a big, attentive audience glued to their boxes!

Radio One Hijack

AN AMAZING hijack of BBC Radio took place over the whole of Southern England recently. At 11pm on April 1st Radio 1 listeners everywhere from Eastbourne to the Scillies were astonished to hear John Peel's opening remarks drowned in a hail of machine-gun fire, followed immediately by a rendering of The Who's classic hit *Substitute*. Mystery deepened into intrigue as the familiar coffee-table-rock slot gave way to a bizarre anthology of banned records, esoteric humour and subversive comments.

For 35 minutes the good folk of the South Coast heard a demonstration of uninhibited free radio... in stereo. A spoof public service broadcast from the Metrickation Board warned the fearful populace that if they persisted in using old-fashioned units they might find their houses "mysteriously demolished by bulldozers during the night." That was followed by a banned 10cc track advocating degrees of intimacy undreamt of in Broadcasting House... and a diatribe by "the new chairman of the BBC", one Idi Amin.

While all this was going on Beeb engineers were wrestling manfully with the ether trying to put John Peel back on his throne. At 11.35 spellbound listeners had their fidelity pirate programme rudely interrupted by Auntie's crude attempts to reassert her monopoly, and the voice of the hip establishment lurched uncertainly back into the world of the living, accompanied by much thumping and hissing.

The coup was made possible by the fact that every night the BBC Rowridge transmitter on the Isle of Wight rebroadcasts Radio 1 on VHF directly to Southern England and, by way of further relays, throughout South West England and the Channel Islands. Unlike most transmitters, which are fed by landline, Rowridge takes its Radio 1 signal off the air from the master transmitter at Wrotham in Kent, so that anyone who can insert a pirate signal in place of the one from Wrotham will have Rowridge and its dependants at their mercy.

And that's what happened to J.P. A small 30 watt stereo transmitter connected to a cassette player had been hidden in

a hedgerow not a thousand metres from the loW mast. Activated automatically at 11pm by a solid-state binary-counter this small-but-very-quiet pirate station came on the air, swamping the Rowridge transmitter with a signal 200 times stronger than the one received from Wrotham, taking over effortlessly from Radio 1.

It isn't known how long BBC engineers took to become suspicious about the unusually high programme quality but it was over half an hour before they could rectify the situation. Eventually they managed to rig up an emergency landline by way of Post Office Telephones, so that when Radio 1 was restored it was in mono, distorted, lacking top frequencies and generally exhibiting all the grotteness of an ordinary domestic telephone line.

The technical sophistication of the project brought private expressions of admiration from BBC engineers themselves. The London-Wrotham signal is carried along a 13-channel pulse-code-modulated (PCM) microwave link built to high specifica-

tions. And as BBC off-air receivers are very particular about the sort of signals they relay to the public the pirate transmitter had to be fiendishly stable, drifting only a few hundredths of one percent from its allocated frequency throughout the whole performance.

After the midnight news and weather forecast in the wee small hours of April 2nd drowsy Radios 1 and 2 listeners were treated to an unusual announcement. In the sweetest possible way the presentation lady apologized to listeners in Southern England who "may have been listening to the wrong programme" and expressed the Corporation's satisfaction that they were "now back with us". Not a mention of anarchy breaking out all over. Unfortunately it is a trick that can never be pulled again. A couple of days later, as a mysterious person slipped quietly off the Isle of Wight with a small package under his arm, BBC and PO engineers were busy closing the loophole, installing high quality landlines to carry Radio 1 safe and sound to Rowridge.

These are some excerpts from Undercurrents.

Crystal Palace Jam

SPOILSPORT RADIO jammers are playing a nightly game of cat-and-mouse with Post Office engineers in the streets of South London. With their transmitters hidden in the boots of cars and the backs of vans the jammers are waging electronic guerilla warfare against the Crystal Palace 'ham' repeater station, known to its friends as GB3LO.

The repeater is owned and operated by the Radio Society of Great Britain as a service to amateurs, enabling them to boost their signals over much great distances. It is used on the VHF 2 metre band by 'mobile' transmitters which would otherwise be limited to a range of about 15 miles. By tuning in to the repeater station their signals can reach over most of Southern England.

But the jammers, many of whom are themselves licenced radio hams, regard this as cheating. They say amateur broadcasters should overcome the problem of range by using their ingenuity instead of hitching a ride on GB3LO, and for the last 3 years they have persistently interfered with the repeater's operation. There are about 30 jammers in all, taking turns to cruise around Crystal Palace broadcasting music, foul language, impersonations of well-known public figures, irreverent comments and even details concerning the private lives of Post Office engineers.

For its part the Post Office is determined to crush this violation of good broadcasting ethics, although it hasn't had much success so far. The only prosecution to arise out of the campaign was that of a jammer actually located and arrested, (not very gently) by "legitimate" amateurs doing the Post Office's job for them. Both they and the PO were dismayed when the malfactor was fined a paltry £12 by a beaming magistrate who announced that the defendant had been "ham-fisted".

The Post Office trackers thought they were in luck last month when they intercepted a group of people in a van full of radio equipment during a particularly heavy jam session. After deep interrogation at the local nick, however, the prisoners managed to convince the Police that they were a squad of vigilantes also hot on the heels

of the jammers, and were somewhat begrudgingly released.

The original jamming campaign was intended to get GB3LO closed down which it actually succeeded in doing for 2 months in 1975. Recently, though, it has become a pretext for ritual aggro between the wreckers and the Post Office with jammers driving very close to the transmitter in blatant provocation of the waiting detector vans. Sooner or later arrests will be made, and seasoned observers confidently anticipate fines rather larger than £12.

Pool probe

CAMERAS in Dale Street, a busy thoroughfare in central Liverpool, are being used for surveillance of pedestrians as well as for their official function of traffic control. A report in *Liverpool Free Press* tells us of the arrest of an unnamed man shortly after a bomb scare at nearby Cheapside police station. He was asked what he had been doing in Dale Street on the day of the scare and, upon asking how it was known that he had been there, was told that he had been "seen by the cameras". This can only mean that police acquainted with the appearance of local lefties (the man is an NUPE official at Walton Hospital) must have examined all the footage of pedestrians in Dale Street that day. Next time you fork out for your Road Fund Licence don't complain: free protection from the forces of anarchy with each one.

POST SCRIPT

Things are really getting heavy over here. Duncan Campbell - the guy most responsible for UC7 and the single most knowledgeable source in the UK has been busted and held without bail under Official Secrets charges (i.e. in no other countries, except Red ones, would it be an offence). I don't know but I think he's been framed/set up by a special branch for revealing innocuous info about gov't communications HQ monitoring of all international phone calls.

"More arrests are expected..." so everyone is going to have to go to ground, since anyone DC communicated such info to is also liable for two years inside. Hence I expect to see most of the Undercurrents crew, possibly B.I.T. etc hassled at least. It would be a nice touch to dedicate an issue to DC and Mark Hosenball, the latter now being deported. [Consider it dedicated] It's worth a thought that perhaps 80% of what TAP prints couldn't be printed here without making yourself liable to O.S. Act charges.

Our P.O. trained receptionist tells me the following. Normally when someone comes in on the board, on auto boards anyway, she has no way of knowing where the call is coming from on that exchange. So if the caller places a call and gives a wrong own number, the P.O. pays. To guard against this, she "TKOs" onto the number she is given via another line (Not quite true. The positions that are told to TKO each and every call rotate.) If she hears the sound of the exchange coming back to her, she knows it's ok. If she gets nothing, she then checks out the # with the # clerk who tells her if the # given is part of a business multi-line setup or not. If it isn't, she knows it's an invalid call - because on a single line she'd have been able to TKO on it.

On a business # say 999-3010 with 10 lines, depending on the traffic on the private board the call giving the #999-3010 could be on any line 3010-9 inclusive, so the operator can't check. Moral of story: if you want to make free operator connected calls, give a # that is a business with a large PMBX or PABX on your exchange. DR

ATTENTION: COMPUTER FREEKS!

The Personal Computing Directory will contain names, addresses, telephones, descriptive keywords, and other information about people, clubs, societies, associations, organizations, newspapers, newsletters, book publishers and distributors, magazines, manufacturers, equipment distributors, mail order services, kit vendors, software developers, maintenance and repair services, convention and meeting organizers, credit and non-credit courses, lectures, clinics, demonstrations, tours, contests, flea markets, in a word - everything in the personal computing field! The directory will have three main parts. The first, a geographical listing, will consist of each name, address, telephone, and descriptors, listed in zip code order, and alphabetically within a zip code. The second part will be an alphabetically sorted list of people and organizations. The third part will be a subject list, sorted alphabetically.

The price will be \$4.95, for a 200+ page, 8 1/2 x 11 inch paperback, available about April 1, 1977 from: Personal Computer Directory, Box 134, Harvard Square, Cambridge MA 02138.

HELP TELCO!

According to Southern New England Telephone's Telephone News, "If you know of someone who's been shoplifting phone service, report the person to our security office. Call collect to (203) 771-2134. We'll take it from there."

So... if someone like your boss, or high school principal, or nosy neighbor, or anyone else gives you a hard time about anything, or if someone gives you a bad check (see Bullshit!), and you suspect they may be cheating The Phone Company, be sure to notify Telco. Should be good for a lot of laffs.

BULLSHIT! PART 2

by TOM EDISON

If you think my editorial in the December issue of TAP entitled "When The Shit Hits The Fan" was too rough on our readers, then you'll really shit in your pants when you read these new policy changes! Ordinarily, the rubber checks that some of you cheap bastards are sending us would be bad enough, but our bank has a handling charge that they pass along to us, so in addition to being ripped off on merchandise and postage (not to mention Elmer's Glue-All!), we're also forced to pay for your rubber check processing! When you start biting the hand that feeds you, it's time to revise our own "systems & practices". Effective immediately: When we get notified that your rubber check has bounced, we will send you a little note "politely" informing you of your "oversight". If at that time you decide that you do not want the ordered merchandise, all we ask is that you reimburse us for the check handling cost charged us by our bank. I think that this is fair and reasonable. If we do not hear from you within a reasonable amount of time, we will assume that you intentionally wanted to rip us off. We will then repay your "kindness" by giving your name and address to Bell Security, the FBI, the CIA, the IRS, the Post Office, the House UnAmerican Activities Committee, and any other appropriate government investigatory agency. This will ultimately result in many "fun filled" years ahead trying to clear your "good" name and reputation. All for a lousy \$4. An eye for an eye!

Please remember that for immediate processing of your order you must send either a money order or a cashier's check. All personal checks MUST clear your bank before we process your order. This could possibly cause your sub to start several months after we get your personal check, so if you do not want this delay, please send either a money order or a cashier's check.

I've received many recent requests for ringback, loop, and verification numbers for various cities. We have some but I'd like a hell of a lot more. You can help by sending me a list of all ringback, loop, and verification numbers for your area. I will compile a listing alphabetically by city and print up a table of numbers when I get a sufficient amount to warrant it. Let's get off your respective asses and send in this requested information. You can never tell when YOU might need some specific info. I hope that I get better reader response on this than I did when I requested readers to send me their off-hook line current. Only 23 readers responded! Priddy Piss Poor!

Dear TAP Folks

Re Xerox access keys: if you use a legit key, but make only one copy at a time and pull the key out after you push the "make copy" button, the counter in the key doesn't increment - altho the machine counter still does. This works on a Xerox 3100; I don't know about others.

He Got Clean Away

Fort Worth, Tex. (AP) — A 23-year-old prisoner has escaped by picking up a broom and sweeping his way out of the city's public safety building.

Authorities said that the prisoner, Rex Daniel, had been arrested for investigation of auto theft and was about to be photographed and fingerprinted when he escaped.

The police said that a jail attendant had taken the suspect to the identification bureau and left him. The man grabbed the broom, slowly started tidying up the place and dusted off
